ED TIDIES HIS ROOM

**Subject:**

Native Languages (Greek)

Content:

(Vocabulary, oral skills)

**Computational practices:
choose what fits**

- Algorithms
- Problem solving
- decision making

Unplugged/plugged:

plugged

**Preparation time:**

30 min

**Age:**

7-9 years old

**Duration:**

60 - 90 min

**Location:**

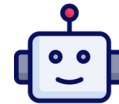

school, any classroom

**Group distribution:**

groups of 3-4 students

**Difficulty**

1/3

**After this lesson, the children will be able to...**

- tell and recognize the summer and winter
- use correct vocabulary to describe clothing
- match clothes according to the season we use them
- manipulate edison robot by knowing how to start, program (using edblocks)
- work together to solve challenges

Materials needed:

- Edison Robots and markers of different colours connecting on them
- Large floor grid (represents robot's room and having different clothes on it) . You can use the grid in the Annex as an example.

Preparation and teacher notes

We make sure that we have internet access and an interactive board so that the students can interact with the vocabulary games proposed. Otherwise, if we have access to the ICT class, we can provide a pc for each student so that each one of them can interact separately with the vocabulary games.

Create a large grid on the floor using tape or paper. You can also print the example grid found in the Annex. The floor grid represents the robot's room where there are thrown many different clothes. At the top of the grid, we place two blocks, one for summer and one for winter. Each box is surrounded by a specific colour.

Warm up 20'

Introduce today's topic that is the seasons and the clothes we choose for each one of them.

We demonstrate four images showing the four seasons to the students and we ask them to name each one. After that, we write down the name of each season on the whiteboard and encourage the students to spell and read them loudly. We focus on summer and winter, as these are the main seasons in our activity.

After that, students engage with two interactive vocabulary games (the two first shown in the helpful links session) where they can have some practice.

In the second phase of the warm up, we let the students engage with the other two interactive games referring to clothing. We encourage them to read loudly the word they choose and let them interact and watch the results of their choices. We also encourage discussions between them when they face difficulties at matching the clothes with the right image.

Build up 1/ 20'

We present the edison robot to the students, explaining to them how it works. We let them know how its buttons work and how we can program it using the barcodes (Basic Information about Edison are included in the Annex).

We let them have a mini activity in order to get acquainted with the robot. Thus, they have to scan the barcode given to them and then, they will be able to control the edison robot by clapping their hands.

Preparation and teacher notes

Encourage teamwork and clear communication.

Encourage students to read and speak loudly, using right accent.

Build up 2/ 30'

We let the students program Edison, by using the edblock app. We explain to them that their goal is to make edison follow a black line in order to connect each clothing to the right season.

The grid is, then, presented to the students. The main character is Ed and he has to tidy his room by gathering the clothes thrown on the floor and by classifying them according to the season he wears them.

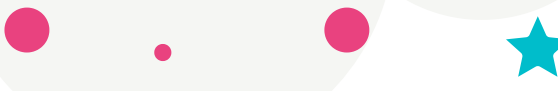

Instructions for the students:

- You have to draw a black line in order to connect the start (where edison begins from) with the clothing of your choice, where you have to put an item on (so that edison stops moving when facing it). Then, Edison makes a beep sound and you have to spell the name of the clothing.
- Take the obstacle and draw, then, another black line connecting the clothing with the season it belongs in the same way. Don't forget to put an obstacle on it, so that edison stops there.
- Program edison to turn both lights on and you have to spell the name of the season.

We put on the Edison robot the marker case so that students can match the clothes with the seasons drawing a line with a specific colour. At the end of the activity, summer clothes are connected to the summer block with red lines and winter clothes are connected to the winter block with a blue line.

Students play in turns. If a student makes a mistake, others have to give him feedback. The activity is completed, when all clothes are properly arranged.

Don't forget to erase the black line every time a student finishes its route.

Rehearsal 10'

Preparation and teacher notes

-

Clean up 10'

The teacher gathers and organizes all materials and discusses key takeaways with students:

- "How was their experience with Edison?"
 - "What was challenging?"
 - "How did you fix mistakes in your robot's journey?"
- 

Summer

Winter

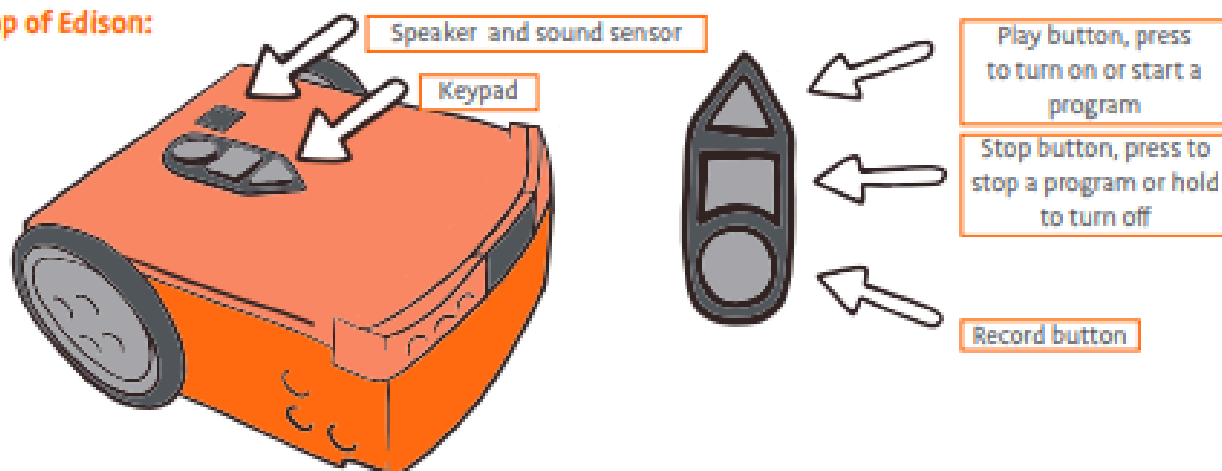

START

Annex: Basic Information about Edison

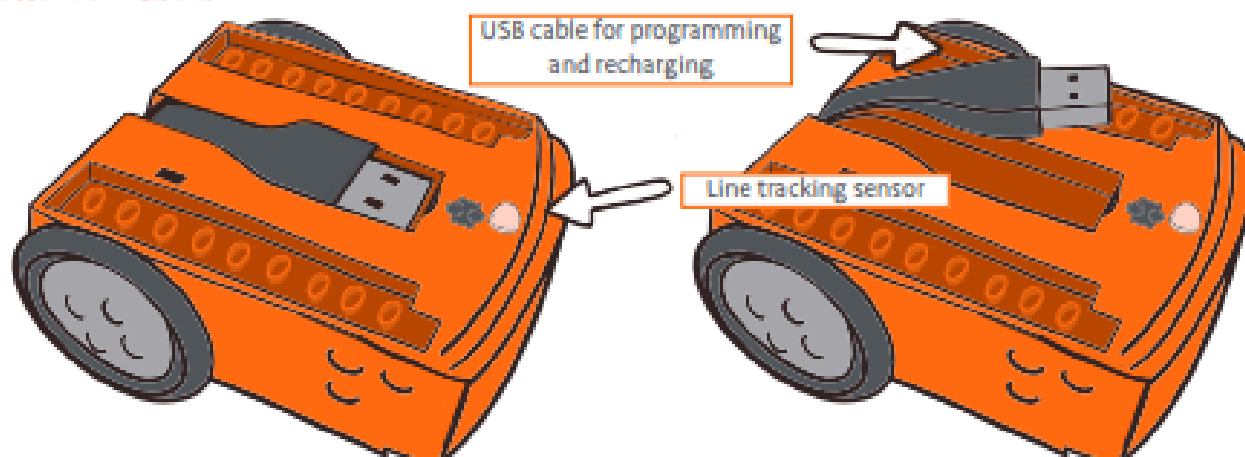

Activity

Before we start programming Edison, let's get to know Edison. In the pictures below you can see all of Edison's different parts. Can you find all of these parts on your Edison robot?

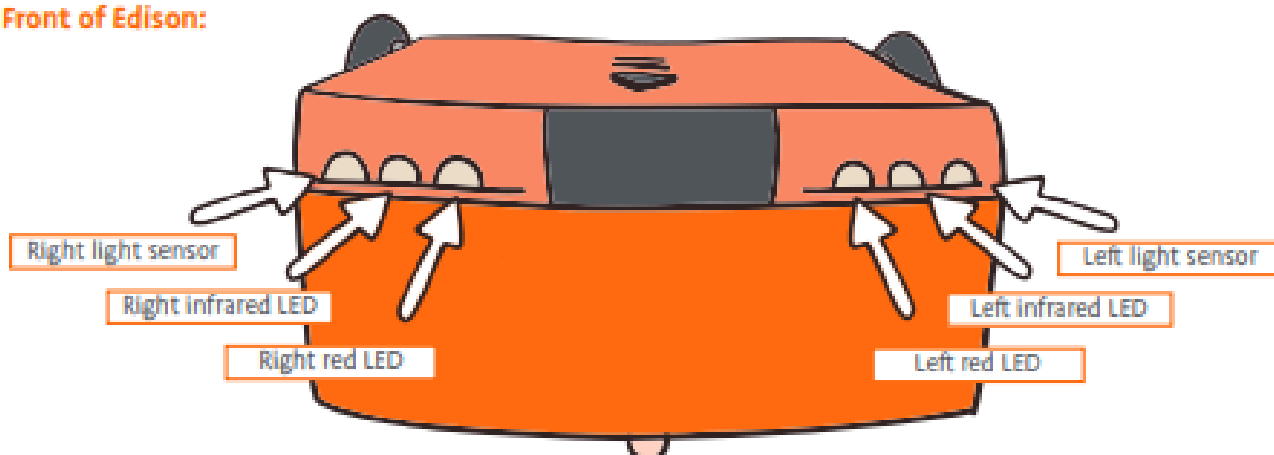

Top of Edison:

Bottom of Edison:

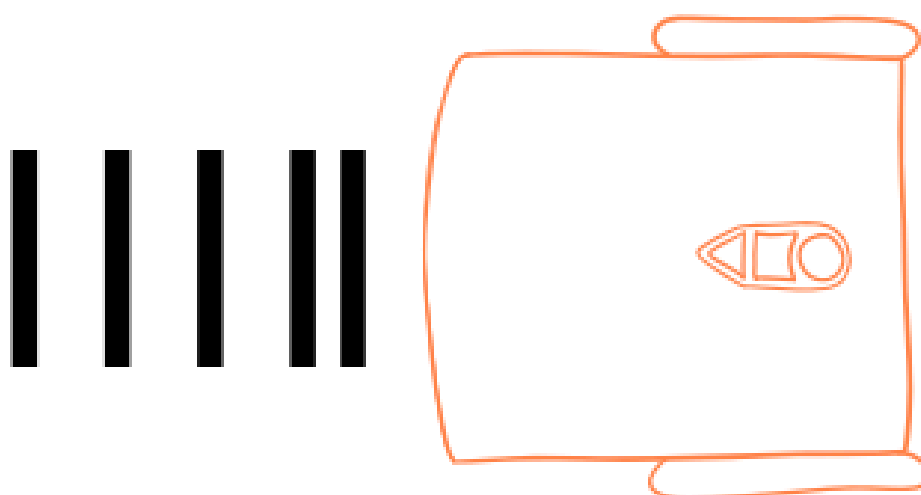

Front of Edison:

Annex: One exemplary activity

Clap controlled driving

Edison has a sound sensor which can hear loud sounds, like when you clap your hands. The barcode below has a built-in program. The program makes Edison do things when it hears loud sounds.

Read the barcode

Put Edison on the outline.

Press the record button (round button) three times. Edison will drive forward and scan the barcode.

What to do with Edison

Put Edison on the floor or table. Press the play button (triangle button). Now, clap your hands one time. Edison will turn to the right.

Clap your hands two times. Edison will drive forward.

If Edison can't hear you clapping, you can tap your finger on the top.

Coding: Using Black Lines

Alternative Coding: Using Torch' Light
