STEP BY STEP: THINK, SOLVE, RESOLVE

**Subject:**

Civic and moral education

Content:

Personal Skills

Interpersonal Skills

Social Skills

**Computational practices:
choose what fits**

- Abstraction
- Algorithms
- Problem solving

Unplugged/plugged:

unplugged

**Preparation time:**

30 min

**Age:**

8-12 years

**Duration:**

75 min

**Location:**

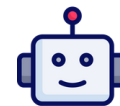

school, any classroom

**Group distribution:**

groups of 3-4 students

**Difficulty**

1/3

**After this lesson, the children will be able to...**

- Understanding conflict resolution: Recognizing different types of conflicts and identifying common strategies to resolve them.
- Developing critical thinking: Analyzing the situation from different perspectives and evaluating possible solutions.
- Applying computational thinking: Using decomposition, abstraction, and algorithms to structure a step-by-step conflict resolution process.

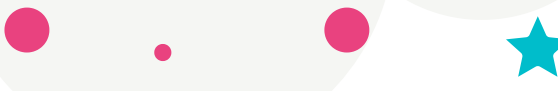

Materials needed:

- Whiteboard and markers → To write down the conflict resolution steps shared by students.
- Poster board or large paper → To create a "Conflict Resolution Checklist" that can be displayed in the classroom.
- Post-its or index cards → So each student can write down one key takeaway from the activity.
- Pencils and paper → If you want students to do an individual written reflection.

Digital Option: If you prefer a digital format, you can use an interactive whiteboard or tools like Padlet, Jamboard, or Canva to create a collaborative checklist.

Preparation and teacher notes

Encourage teamwork and clear communication.

Warm up 20'

The first part of the activity will focus on sharing:

- what the students know about conflict resolution
 - what personal skills they believe are necessary
 - what strategies they usually use to resolve conflicts in their daily lives (decompositions skills)
- 

Preparation and teacher notes

1. Calm down:
 - a. Breathe
2. Think:
 - a. What has happened?
 - b. How do you feel?
 - c. How can you solve it?
3. Speak:
 - a. Describe what has happened.
 - b. How you feel.
 - c. And ask for what you need.
4. Listen:
 - a. Listen to the other person and put yourself in their place (what they feel? What they need?).
5. Seek good solutions for both parties:
 - a. Try different solutions until you find one that works.

Build up 25'

The teacher introduces a mat with different ideas/steps images and text.

The students select which elements are needed to resolve the conflict (abstraction and pattern recognition skills), and then they arrange them in chronological steps (algorithm).

It could be worked on with a carpet and ground robots or in a detached way with tiles.

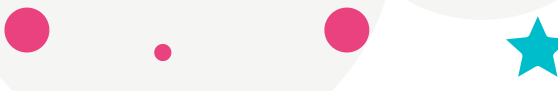

Rehearsal 30'

Objective: Students should identify steps to solve the specific case (abstraction) and create a problem solving (algorithm).

Context: In a primary school, during the break, boys often occupy most of the playground, because they're playing soccer. The play area becomes an improvised field where boys run and play, while girls are relegated to a small corner of the playground. Although some girls participate in soccer, many feel excluded or uncomfortable doing so, either because they are not interested in soccer or because they feel intimidated by the boys' dominance in the play area.

Conflict:

- The girls complain that they have very little space to play and feel excluded from the recreational activities dominated by boys.
- Some girls express their desire to play different games that are not centered around soccer, but they find it difficult to find a suitable place in the playground.
- On the other hand, the boys defend their right to play soccer, arguing that it is their favorite activity and that they are entitled to occupy the available space on the playground during recess.

Preparation and teacher notes

Encourage teamwork and
clear communication.

Clean up 10'

- Ask students: "What steps did we follow today to resolve the conflict?"
 - Write their answers on the board or a poster to create a final conflict resolution checklist.
 - Have students share one key takeaway from the activity.
-
