ROBOTICS & CODING
SUPPORT STUDENTS' SKILLS
DEVELOPMENT

Analysis of teachers' perceptions and training needs Report

We are thrilled to announce the first major result of the Robots Meet Arts project with the release of WP2 - Report 1: Analysis of Teachers' Perceptions and Training Needs.

How do teachers perceive the use of robotics and coding in their teaching practices, and what benefits do they see for students?

This comprehensive analysis delves into the perspectives of educators on the integration of educational robotics and coding into the curriculum.

Participants: Teachers from Belgium, France, Greece & Spain.

Survey: 104 Teachers

Interviews: 13 Teachers

Key Highlights from the Report:

- **Perceptions:** The majority of teachers view educational robotics as a valuable tool to enhance student engagement and learning outcomes.
- **Training Needs:** Identified a significant demand for professional development and resources to effectively integrate robotics and coding into teaching practices and arts and humanities subjects.
- **Challenges:** Highlighted barriers such as lack of access to technology, time constraints, and the need for tailored training programs.

We invite you to explore the [Full Report](#) to gain deeper insights into our findings and understand the implications for the future of education.

Training Programme description & Modules

Objective: Develop a comprehensive training programme for empowering primary school teachers to use ER and coding in their teaching and to offer better quality education for all children regardless of their differences.

Currently, the teacher training programme is under development. It will consist of six modules that will broaden teachers' knowledge about the potential of coding and robotics across the primary school curriculum, instructing them on the basic principles of robotics and coding, and prepare them to implement robotics and coding in Arts and Humanities subjects.

Module 1

Introduction to ER and coding

Module 2

Teaching with ER and coding

Module 3

ER and coding activities in Arts and Humanities

Module 4

Development of inclusive and gender perspectives teaching material

Module 5

Familiarisation with ER and coding resources

Module 6

Knowledge put into practice & presentations

Robot Meet Arts goes to the European Researchers' Night

The project was presented at the European Researchers' Night in Tarragona, Spain that took place on 27th of September of 2024.

The Applied Research Group in Education and Technology (ARGET), from the University Rovira i Virgili, led an inspiring workshop, 'Robotics in Action: Programming the Future', featuring five fun challenges for kids of all ages.

A hands-on experience with robotics and programming!

Hidden drawing

Follow the algorithm to discover which figure is hidden.

Create your algorithm

Get the robot to reach the house through the flower fields.

Robotic arm

Check if the algorithm is correct to build the glass figure.

Flappy Bird

Did you know you can build your own button with paper and copper wire to play this game based on Arduino?

Boti-Boti

Program the MicroBit board to create a hop counter. The record is in 16 jumps!
