

TPM in Belgium

We're excited to share some highlights from our recent meeting in Leuven, where we had the pleasure of welcoming our project partners. These days were filled with inspiration, collaboration, and innovation!

Our visit to **De Ark primary school** provided us with valuable insights into their progressive approach, built on Autonomy, Relationship, and Strength. We explored how they implement team-teaching, integrate technology into education, and apply diverse teaching methods to enhance learning.

At the **UCLL Techniek en WetenschappenAcademie (TWA)**, we attended an engaging STEM workshop where students used robotics to successfully complete challenges. It was incredible to see how technology fosters creativity and problem-solving skills at an early age!

During our meeting, we focused on developing a comprehensive training program for primary school teachers. Each partner presented their module, all designed to support educators in integrating Educational Robotics (ER) and coding into their lessons.

We also worked on a practical curriculum featuring hands-on lesson plans. These include inspiring robotics and coding activities tailored for subjects such as literacy, history, and foreign languages. Additionally, we worked on the development of the Guidelines for Inclusive Implementation (GII) to ensure that all children—regardless of their background or learning style—can benefit from these innovations.

We look forward to sharing more exciting updates with you soon!

ROBOTS MEET ARTS Curriculum

The Consortium is developing a Curriculum to empower primary school teachers. The Curriculum will explore the benefits of robotics and coding for student learning, practical ways to implement them in daily lessons, and best practices for inclusive education.

The Curriculum will include three **unplugged lessons** and **three block-based lessons** using Scratch, designed to introduce children to the fundamentals of programming in an engaging and accessible way.

To further support teachers, we are also creating three **ready-to-use lessons for each subject area**, formatted in a user-friendly template. These lessons will help educators integrate robotics & coding into subjects as **Geography, Mother and Foreign Languages, Arts & Design, Music, Civic & Moral Education, and History.**

Presentation at the EDUTEC conference

Researchers from the Robots Meet Arts project had the privilege of presenting the communication, "Teachers' Perspectives on the Potential of Educational Robotics and Coding in Education." at the **EDUTEC 2024** conference in Sevilla, Spain.

The presentation explored how robotics and coding can be effectively integrated into arts and humanities subjects, offering valuable insights and fostering meaningful discussions on interdisciplinary approaches to education.

The **EDUTEC 2024 conference** brought together a diverse and dynamic community of educators, researchers, and technologists, creating opportunities for collaboration and the exchange of transformative ideas.
